SIMAVI, APRIL 2021
Welcome

Powerful women, healthy societies.

A promise is a promise

Leave no-one behind is the central, transformative promise of the 2030 Agenda for Sustainable Development and its Sustainable Development Goals. It represents the unequivocal commitment of all UN Member States to eradicate poverty in all its forms, end discrimination and exclusion, and reduce the inequalities and vulnerabilities that leave people behind and undermine the potential of individuals and of humanity as a whole.

I start my preface with this reminder as 2020 has shown us that this promise is more important than ever after a year in which the Covid-19 pandemic has left its mark on so many lives, especially the lives of girls and women. They are disproportionately impacted by events like the pandemic and climate change. They are set back significantly in terms of gender equality and the fulfilment of their rights.

Our work focuses mainly on four SDGs: good health and well-being; gender equality; clean water and sanitation; and partnerships for the goals. Despite the practical barriers to carrying out our work thrown up by the pandemic, we have still been able to adapt our programmes to support local governments with their preventative measures to stop the spread of the virus. And, with support from the Dutch Ministry of Foreign Affairs, we have launched the WASH First programme with the aim of improving hygiene and access to water and sanitation – for obvious reasons. The SDGs provide a mirror on how we are progressing in the world, and on a smaller scale, as an organisation. Since last year, we have included SDG-data in our Impact Report, demonstrating our dedication, reflection and accountability for contributing towards the global objectives.

In 2020 Simavi commemorated 95 years of working for a healthy and equal world in regions where this is far from self-evident. I am proud to be part of Simavi’s journey, even for just a short period of Simavi’s history, and I thank all our partners, our donors, our Supervisory Board and our employees for their commitment to our work. With cautious optimism, I look forward to new challenges and opportunities in 2021.

Ariette Brouwer

Our Impact Report sets out our dedication, reflections and accountability for contributing towards the global objectives

Simavi Impact Report 2020
Our vision:

Simavi\(^1\) strives for a world\(^2\) in which all women and girls\(^3\) are socially and economically empowered\(^4\) to pursue their rights\(^5\) to a healthy life\(^6\), free from discrimination, coercion and violence.

1 Who? We do not work alone: we team up with other international organisations with complementary expertise and experience, and with our in-country partners that are rooted in and understand the local and national contexts we work in.

2 Where? We implement our programmes in Bangladesh, Ethiopia, Ghana, India, Indonesia, Kenya, Malawi, Nepal, Tanzania, and Uganda.

3 Why not men? In general, women and girls face greater challenges in achieving a healthy life than men and boys. Women and girls are also the most affected by a lack of SRHR and WASH, and they are in the weakest position to gain their rights.

4 Why? Empowering women, both socially and economically, improves their ability to pursue a healthy life.

5 Their right? Health is a fundamental human right, inherent to all human beings, regardless of race, sex, nationality, ethnicity, language, religion or any other status. And yet for many millions of people around the world this right is not realised. We inform women and girls of their rights and support them in claiming these rights from those responsible, such as governments and service providers.

6 What is a healthy life? We subscribe to the WHO definition: ‘Health is a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity.’

So what do we focus on? There are many factors that contribute to good health and well-being. We are experts in two factors we believe are crucial for a healthy life: sexual and reproductive health and rights (SRHR) and water, sanitation and hygiene (WASH). Wherever possible, we implement a combination of SRHR and WASH in our programmes since the two strengthen each other. Our focus is on women and girls.

Our work on WASH & SRHR and the focus on women are combined in our five expertise areas: Menstrual Health | Maternal Health | Bodily Integrity | Water and Sanitation | Hygiene
Kenya

Our Programmes support health and rights in a supportive environment.

Goal: Make a difference in the lives of women, girls, men and boys in at-risk countries.

Get Up Speak Out

YONECO | VHAI | NEEDS

Foreign Affairs

Goal: Improve water supply in Bandung with a focus on increasing access to safe water for the poor population and providing drinking water to currently unconnected communities.

Timeline 2018 - 2021

Making the Most of What We Know

YONECO | VHAI | NEEDS

Foreign Affairs

Goal: Promote access to sustainable menstrual hygiene products, and are participating actively on the discussions on menstrual health and SRHR. Also women are socially and economically empowered in their communities.

The Golden Line

Timeline 2017 - 2020

Ritu

Location: Bangladesh

Donor: Embassy of the Kingdom of the Netherlands in Bangladesh

Consortium partners: SRHR Alliance, and the Uganda WASH Alliance International (WAI) partners

Goal: Improve the mental health of girls between 10 and 13 years old, leading to overall improved health and well-being, social and economic participation of girls in Bangladesh.

Timeline 2015 - 2020

SEHATI

Location: Indonesia

Donor: Embassy of the Kingdom of the Netherlands in Indonesia

Consortium partners: PHT, Mahila Kalyan Samity

Goal: To enhance access for girls and young women – especially girls and young women – who are empowered to realise their sexual and reproductive rights and health, and people in the community have a positive attitude towards Young people's sexualuality.

Goal: Make a difference in the lives of women, girls, men and boys in at-risk countries.

PROPOSI

Location: Indonesia

Donor: Stichting Mark Biologisch Plus | Stichting Vallei | Schnalmaul

In-country partners: Amref, Diorapthe, Stichting Zien, Dutch Foundations

Goal: To enhance access for girls and young women – especially girls and young women – who are empowered to realise their sexual and reproductive rights and health, and people in the community have a positive attitude towards Young people's sexualuality.

Our programmes reflect our diversity and different approaches to working towards a healthy life for all.

Access to Sanitation and Hygiene for all (ASHA)

Location: Nepal

Donor: Dopper

In-country partner: SEBAC

Timeline: 2020 - 2022 Goal: To enhance access for quality of drinking water, improve sanitation status and hygiene behaviour, local governance and maintenance of WASH facilities, and empower local residents in socially excluded groups.

More than Brides (MTBA)

Location: Malawi | India

(Pakistan, Nigeria, Malawi through partners)

Donor: Dutch Ministry of Foreign Affairs

Consortium partners: Save the Children Netherlands (lead) | Oxfam Novib | Population Council

Timeline: August 2019 - June 2021

Goal: Promote health-related hygiene practices to prevent further spread of Covid-19 in at-risk countries through awareness raising and improved access to WASH services.

WASH First

Location: Tanzania

Donor: Ministry of Foreign Affairs

In-country partners: WASH Alliance International (WAI) partners

Goal: Promote health-related hygiene practices to prevent further spread of Covid-19 in at-risk countries through awareness raising and improved access to WASH services.

Timeline: September 2020 - November 2021

Give Wings to our Girls (Mulania)

Location: Malawi

Donor: Simavi

In-country partners: GENET

Timeline: 2018 - 2021

Goal: Reduce school dropout rates among girls aged 10-16 years in Mulania district, through the adoption of menstrual hygiene practices, utilization of SRHR information and services and improved water and sanitation facilities in schools and surrounding communities.

PROPOSI

Location: Indonesia

Donor: Stichting Mark Biologisch Plus | Stichting Vallei | Schnalmaul

In-country partners: Amref, Diorapthe, Stichting Zien, Dutch Foundations

Goal: To enhance access for girls and young women – especially girls and young women – who are empowered to realise their sexual and reproductive rights and health, and people in the community have a positive attitude towards Young people's sexualuality.

Our programmes reflect our diversity and different approaches to working towards a healthy life for all.

Access to Sanitation and Hygiene for all (ASHA)

Location: Nepal

Donor: Dopper

In-country partner: SEBAC

Timeline: 2020 - 2022

Goal: To enhance access for quality of drinking water, improve sanitation status and hygiene behaviour, local governance and maintenance of WASH facilities, and empower local residents in socially excluded groups.

More than Brides (MTBA)

Location: Malawi | India

(Pakistan, Nigeria, Malawi through partners)

Donor: Dutch Ministry of Foreign Affairs

Consortium partners: Save the Children Netherlands (lead) | Oxfam Novib | Population Council

Timeline: August 2019 - June 2021

Goal: Promote health-related hygiene practices to prevent further spread of Covid-19 in at-risk countries through awareness raising and improved access to WASH services.

WASH First

Location: Tanzania

Donor: Ministry of Foreign Affairs

In-country partners: WASH Alliance International (WAI) partners

Goal: Promote health-related hygiene practices to prevent further spread of Covid-19 in at-risk countries through awareness raising and improved access to WASH services.

Timeline: September 2020 - November 2021

Give Wings to our Girls (Mulania)

Location: Malawi

Donor: Simavi

In-country partners: GENET

Timeline: 2018 - 2021

Goal: Reduce school dropout rates among girls aged 10-16 years in Mulania district, through the adoption of menstrual hygiene practices, utilization of SRHR information and services and improved water and sanitation facilities in schools and surrounding communities.
Global leadership, shifting the power, southern leadership, localisation… whatever name you choose to give it, the fact is, as an international NGO we should take responsibility, look in the mirror and recognise how we are part of the problem.

We need to shift power and resources to those that matter most and promote more equitable and people-led development in order to realise the most impact. One of the efforts that Simavi undertook in 2020 was the partner satisfaction survey, an extensive quantitative and qualitative investigation of power relations within our partnerships.

Evolving partnerships - towards global leadership

We asked our partners about the most important thing that could be done to make our partnerships stronger. Their answer was primarily participating in fundraising and co-creating processes to design programmes together. Some partners also mention knowledge sharing and learning as something that could benefit the partnership.

A way of balancing power relationships between Simavi and our partners would be to invest in strategic relation management at the organisational leadership level, beyond the scope of a specific programme. This approach could help to build long-term partnerships where expertise and added value on both sides would be acknowledged and move away from a relationship that is currently programme-based and therefore conditioned by unidirectional financial flows.

Making decisions jointly

When assessing their influence on programmes within their relationship with Simavi, most partners said that their organisation and Simavi make decisions together, but almost a third (29%) said they are not treated as partners in decision-making during the design phase. Partners recognise Simavi’s expertise in ‘packaging’ proposals using language that resonates with donors, but they think local partners should be the main source of programme design ideas.

Some partners complain about having to implement activities and not always being able to decide on changes to make: ‘Simavi has to move away from a donor-recipient relationship in which they have the money and the knowledge, so we have to do what they say.’

Equal partnership: what would it look like?

The results of the survey show that equal partnership starts with fully involving partners in programme design. Partners know the local context and think they should be trusted to design effective activities. Partners are also asking for more say in decisions about adapting programmes at implementation stage, although some partners were more hesitant, fearing they lacked the required skill or capacity.

When asked what Simavi could bring to an equal partnership, partners mention technical expertise, especially on inclusion, gender, advocacy, sustainability and social accountability. Simavi’s role would be to build on its international experience, knowledge of different countries and global network to offer exposure, visibility and opportunities for the partners and for the partnership.

Another critical aspect of a more equal partnership would lie around developing proposals and raising funds together. In that regard, Simavi could play a broker or matchmaker role and help partner organisations to develop skills in proposal writing. Partners expect Simavi to advocate for the earmarking of programme funds for activities that would strengthen the sustainability of local organisations. The sustainability of both partners and programme results could be improved by establishing trust funds for implementing partners or via income generating activities that benefit implementing organisations. Lastly, Simavi would bring added value to an equal partnership through sharing evidenced-backed strategies and ‘lending’ its credibility for better advocacy results.

When asked what their own organisation could bring to an equal partnership, partners mentioned their knowledge of the local context, their expertise in implementation and their capacity for action and mobilisation, both locally and nationally. Partners also see their role as testing models and interventions to generate evidence. In that sense, a partnership between them and Simavi could be a powerful tool to develop knowledge and evidence for programmes and for the sector.

These results are in line with partners’ answers to the question ‘In your opinion, how does your expertise and experience benefit Simavi and its partners?’ Both in 2018 and 2020, our partners vastly agreed (80% and above) that they have specific skills that could be drawn upon by other Simavi partners, that they have deep and extensive knowledge of the context and field reality, that they have the capacity to implement high quality programmes, and that their contributions to learning and knowledge platforms benefit Simavi and other Simavi partners.
Our work during the pandemic

The Covid-19 crisis makes the importance of our work very clear. Access to safe water, sanitation and hygiene facilities and adequate knowledge about these issues are key in preventing the spread of the virus. In our target countries, the status of these services leaves much to be desired. As hospitals and health facilities became preoccupied with Covid patients, our work in medical care, such as health information, contraceptives and safe deliveries at home, became even more urgent.

Women and girls are disproportionately impacted

Women and girls are particularly affected by the worldwide crisis in the short term, since they are the ones caring for the ill and fetching water, and they form the majority of the frontline health workers. They also suffer the consequences of the measures to combat the virus, such as increased domestic violence due to lockdowns or lack of contraceptives and menstrual products. In the longer term, we foresee effects on the social and economic position and rights of women as emergency laws sometimes revoke human rights and access to and use of SRHR services are reduced. The full impact of side effects such as the increasing child marriage rate and unintended pregnancies cannot yet be foreseen, but will set back the position of women and girls and their rights – a worrying trend.

Consequences of the lockdown for our work

All over the world people have been affected by the spread of the virus. As our head office is in Amsterdam, the Netherlands, Simavi follows the guidelines issued by the Dutch government. Our colleagues and partners across Africa and Asia follow the guidelines of their respective governments. As a result, the majority of our staff now work from home. The restrictions we face and the various lockdowns have had a huge impact on our programmes, which are mostly built around group meetings and community interactions, and as a result, activities were put on hold while we reviewed and adapted them to address the global health crisis and to function within the restrictions.

Simavi is not a humanitarian organisation providing relief aid; rather, we work on long-term, sustainable solutions. Our response to this crisis is an adaptive management approach. Adjusting to the new situation requires listening carefully to our partners and the women and girls in our communities to understand what is needed most and what is needed now. Considerable adaptation, innovation and creativity were needed, from both the partner organisations and the supporting staff in our head office.

Although the crisis has been painful on so many levels, there have been some innovations and cases that illustrate the potential of sustainable change in our operations. Not being able to travel forced us to adopt a supportive and advisory role towards our partners, instead of a leading role.

The side-effects of the pandemic

Research results India 2020

Girls report challenges caused by Covid-19 and associated lockdowns. More than half (52.3%) of girls report increased tension in their home and about two-thirds (65.5%) report being more depressed.

- Girls report feeling more depressed 65.5
- Report tensions in the home increased 52.3
- Worried about getting sick from Covid-19 81.2
- Report access to SRHR services is more difficult 57.5
- Spend more time...
  - doing chores 61.6
  - caring for children/elderly 51.2
  - with friends 7.7
  - in the home 92.9
- Violence in my neighborhood has increased 16.5

Girls and parents both report that girls spend more time doing chores and caring for children and the elderly than they did prior to Covid-19.

Girls spend more time doing chores 82.2
Girls spend more time caring for children/elderly 99.2

Worried about getting sick from Covid-19 81.2
How did we support the local activities?

Our first priority was to look for alternative ways to continue our community engagement. We created a two-way communication process in which we and our partners identify what was needed to establish inclusive communication and messaging while ensuring that we reach the most vulnerable and leave no-one behind. Considering the barriers thrown up by the pandemic, the realities on the ground, and the perceptions and defined needs of the communities, we refined or adapted our existing SRHR and WASH messages to integrate Covid-19 messaging aimed at behavioural change. Recognising that social media might not reach most women and other populations at risk of being left behind, we sought other ways to communicate our SRHR and WASH messages. We therefore reverted to the use of radio and more direct delivery of messages through existing community structures.

Like a dream

‘When we started hearing about Covid-19, we did not care much since we thought the disease was only going to affect the countries in Europe. It seemed like some dream, far away for us. When we started hearing that some of the people in Kampala were suffering and dying and people were buried in our neighbourhood, the community became alert and cautious about the pandemic. We extend great appreciation to Simavi’s partner JESE, who came in to collaborate with the district on raising awareness and building the capacities of community health workers to provide information about Covid-19. Our involvement in awareness raising through public drives has been paramount for behavioural change among our community. The radio talk shows and spot messages in our local languages deepen people’s understanding of Covid-19. Currently, most people in our community are aware of the symptoms and are vigilant about going to a health centre if they have any related sickness.’

Mr Robert Abra Asiimwe, village health teams coordinator for Butungama Subcounty, Ntoroko District

At all times, we considered the specific situation in each case and developed channels of communication that are accessible and effective for the particular population. We investigated who uses which communication channels, the channels used by those hardest to reach and those in vulnerable situations, such as women or very remotely located populations, and how they can be reached. We also made sure that messages contain correct and reliable information, are provided by a trusted source, are aligned with government measures and messaging, with a focus on prevention, and offer solutions and do not create fear.

Lockdowns and social distancing complicate women’s access to SRHR and WASH services. With our partners, Simavi played a role in raising awareness and advocated the logistics required to ensure that the most at risk have continued access to contraceptives, menstrual products, water and other essential needs. Available products should be stored locally as much as possible. We actively engage with authorities at different levels to ensure safe and continued access to WASH and SRHR services and hold governments accountable for their commitments.

In September we conducted a partner satisfaction survey to learn more about how we relate to our in-country partners. One of the outcomes was that partners appreciate Simavi’s flexibility in shifting budgets and adapting activity plans in response to the pandemic. Partners indicated that Simavi has supported them during the Covid-19 pandemic by providing material, advice and small grants, and through virtual support to compensate for the lack of field visits. But respondents also mentioned the heaviness and slowness of the process. ‘We had to review the budget numerous times and it took us so much time that we couldn’t implement the activities that were still possible to implement.’

First when hearing about Covid-19, we did not care much since we thought the disease was only affecting Europe. It seemed like some dream, far away for us.

The frequency and intensity of contact between Simavi and our partner organisations has improved and everyone is doing their best given the circumstances. The partner satisfaction survey also indicates that the quality of Simavi’s support during this crisis is similar to other international organisations. The travel ban also impacted capacity building and knowledge transfer activities.

From our partner satisfaction survey (2020). Read more on page 10.
Gender-based violence during the pandemic
It is becoming increasingly clear that many of the lockdown measures have an unsettling side effect: women and girls face an increased risk of violence and they are less able to distance themselves from their abusers or access external support. Simavi adjusted its activities with this emerging sensitivity in mind, for example in our programmes the Golden Line in Tanzania and Our Lives, Our Health, Our Futures in Bangladesh.

In Ghana and Tanzania, a total of 114 male and female community facilitators, women’s ambassadors and miners received training on Covid-19 and gender-based violence and shared the knowledge they acquired with their peers. Due to the travel restrictions and limitations on social gatherings, several planned activities had to be postponed. Instead, partners adjusted their approach and focused on activities that were still possible, such as radio programmes. Some of the gender discussion groups took place in households instead of in bigger groups. We learned that this led to more open discussions between couples on SRHR topics.

Women and girls face an increased risk of violence and they are less able to distance themselves from their abusers or access external support.

2020 - the year of the pandemic in key moments for Simavi

MARCH: The Covid-19 virus is declared a pandemic by the World Health Organization. Colleagues at the Simavi head office and in-country staff start working from home.

APRIL: Simavi signs a joint appeal to call for action. Simavi and over 40 development, human rights and emergency aid organizations argue that support for developing countries and civil society organisations in those countries should be part of the Dutch government’s emergency measures to combat Covid-19.

MAY: Simavi designs a framework of action, making sure our core values are reflected in all adapted activities.

NOVEMBER: Launch of WASH First, a preventive programme in six countries by the WASH SDG Consortium, led by Simavi.

WASH First: boost hygiene and prevention

The Dutch Ministry of Foreign Affairs decided to invest in Covid-19 prevention. WASH First started in November 2020 and will run for one year.

Until there is a vaccine or treatment for Covid-19 available for everyone, there is no better cure than prevention. Access to clean water, safe and hygienic sanitation facilities plus hand hygiene, together with physical distancing, are central to preventing the spread of Covid-19, and a first line of defence against this serious threat to lives and health systems.

Besides the fact that there are certain groups more at risk of facing severe consequences from contracting the virus, such as the elderly and those with underlying health issues, there are other concerns. People that are often left behind or marginalised, like women and girls, persons living with a disability, those living in informal settlements or in extreme poverty, are also the ones with less access to proper facilities. They are more likely to share a toilet for instance, or to not have access to running water to wash their hands.

That is why the WASH SDG Consortium, led by Simavi, consisting of the WASH Alliance International, Plan and SNV, and supported by the Dutch Ministry of Foreign Affairs has started the WASH First programme. Together with our partners in Ethiopia, Indonesia, Uganda, Kenya, Mozambique and Rwanda, we promote health-related hygiene practices to help prevent further spread of Covid-19 to those that are often left behind. The programme uses awareness raising and improved access to WASH services to ensure everyone has a fighting chance against the virus.
One aspect of the crisis is that it reveals how resilient and creative people can be: replacing community meetings with radio campaigns, raising awareness through social media campaigns, and with female entrepreneurs making face masks.
We aim for a lasting change in the lives of women and girls, and luckily we are not on our own in this endeavour. To better connect our work to that of others, we have further clarified the link between our mission and the Sustainable Development Goals.

These goals are defined by the United Nations and provide a shared objective for actors worldwide to realise a lasting change. We recognise the importance of these shared targets and aim to actively show the contribution we are making to those SDGs that relate to our Theory of Change. With nine years to go until the targets are to be met and in the midst of the Covid-19 pandemic, it is also important to realise that the targets may need to be adjusted to respond to global changes. We will closely follow updates and changes to this global common framework in the years leading up to the deadline of 2030, and in the meantime continue to report on the goals we work on.

The SDG indicators linked to these targets are incorporated into our baseline and impact measurements where relevant (but not all indicators in all programmes). This allows us to understand our impact in relation to national and global change. Because the SDG indicators are developed to be widely applicable, they provide a limited picture of the comprehensive changes that we aim to bring about. As they do not cover less tangible aspects of women’s well-being, such as confidence and empowerment, we complement the SDG indicator data with other quantitative and qualitative data. Because our programmes run for a number of years, we do not have data to report on all indicators annually.

SDG Goal 3
Good health and well-being
SDG Goal 3 aims to ensure healthy lives and promote well-being for all at all ages. Simavi contributes to this by enhancing the health and well-being of women and girls. SDG Goal 3 is further specified into 13 targets, of which the following relate to our impact (and outcomes):

SDG 3.1
By 2030, reduce the global maternal mortality ratio to less than 70 per 100,000 live births

SDG 3.7
By 2030, ensure universal access to sexual and reproductive healthcare services, including for family planning, information and education, and the integration of reproductive health into national strategies and programmes

SDG 3.9
By 2030, substantially reduce the number of deaths and illnesses from hazardous chemicals and air, water and soil pollution and contamination

Simavi focus: health effects attributed to unsafe water, sanitation and hygiene

SDG Goal 5
Achieve gender equality and empower all women and girls
SDG Goal 5 contains nine targets, of which the following relate to our impact:

SDG 5.1
End all forms of discrimination against all women and girls everywhere

SDG 5.2
Eliminate all forms of violence against all women and girls in the public and private spheres

SDG 5.3
Eliminate all harmful practices, such as child, early and forced marriage and female genital mutilation

Simavi focus: child, early and forced marriage

SDG 5.4
Recognise and value unpaid care and domestic work through the provision of public services, infrastructure and social protection policies, and the promotion of shared responsibility within the household and the family as nationally appropriate

SDG 5.6
Ensure universal access to sexual and reproductive health and reproductive rights

SDG Goal 6
Ensure availability and sustainable management of water and sanitation for all
SDG Goal 6 contains eight targets, of which the following relate to our work:

SDG 6.1
By 2030, achieve universal and equitable access to safe and affordable drinking water for all

SDG 6.2
By 2030, achieve access to adequate and equitable sanitation and hygiene for all and end open defecation, paying special attention to the needs of women and girls and those in vulnerable situations

Target 6.b
Support and strengthen the participation of local communities in improving water and sanitation management
chapter two

Impact of our work

In 2020, we continued on our pathway to increasing impact. We took steps to improve our impact measurement, created room for reflection and shared our work with others. This deepened our insight into the potential impact of our work and expanded the influence of our lessons learned.

Simavi sees impact as lasting change in the lives of women and girls. The impact we are striving for is a change at the individual level, so that women and girls feel:
- physically healthier,
- more confident and positive,
- more in control,
- safer,
- more positive in their relationships with those around them.

These are what we call the five dimensions of well-being. Positive change in these areas ensures a sustainable change in women’s health, and ultimately in their lives. It is our assumption that those changes in individual women and girls are indicators of their ability to pursue their right to a healthy life in the longer term.

Levels of change
The results of our work can be measured at three levels: by looking at output, at outcomes and at impact.

OUTPUTS are the direct results of our work and are monitored by our implementing partners on an ongoing basis. Outputs may be measured in different ways, from the number of implemented actions to the number of women trained. Outputs give a good idea of the reach of a programme: the number of people that were directly influenced by at least one of our activities.

OUTCOMES are the expected results of one or more strategies in a programme. For example, under outcome 4 in our Theory of Change (women and girls make use of quality SRHR and WASH services) what we want to achieve is that women choose to give birth in a health clinic with a skilled birth attendant rather than at home. This means that we are looking for an actual change in behaviour or in the environment (e.g. laws changed). Outcomes are measured in programme evaluations.

IMPACT is the combined result of the formulated outcomes. Simavi defines impact as a lasting change. This implies that it should be measured over the longer term, ideally at least one or two years after a programme has ended, or by using our five dimensions of well-being.
Impact of our work

Experienced – and still learning

We design programmes with our impact in mind and measure our progress, but we would never learn and grow without looking back. By investing time and resources in learning and reflecting, we continue to improve our work and maximise our impact.

Marianne van Diggele, impact specialist at Simavi, explains: Last year we published an impact report for the first time. This was not only an interesting read to others, but the report allowed us to critically reflect on our impact. Simavi employees reflected on whether we were satisfied with the impact we managed to achieve. An important insight was that the data we collect to assess and demonstrate our impact is still limited, and that this makes it hard to determine whether or not we are on track towards achieving our mission. Colleagues identified impact measurement in ongoing programmes and measuring sustained results after a programme has come to an end as a priority for improvement.

Broadening impact: top 10 promising interventions

Featured in last year’s impact report was the Ritu model. The Ritu model was recognised by Founder’s Pledge as one of the top 10 promising cost-effective interventions to address period poverty.

Urgent global research

Simavi invested in research to get a better understanding of the relation between community level WASH practices and gender-based violence. This is where WASH and SRHR come together, and it will inform our interventions in the Bodily Integrity and Water and Sanitation expertise areas. In 2020, partnerships with local research institutes in Bangladesh, Nepal and Uganda were established to conduct joint research. This partnership will be leveraged to disseminate findings among development practitioners and academics. The impact of Covid-19 as well as the effects of climate change make it even more urgent to understand the dynamics behind gender-based violence and to develop effective responses.

Impact in practice: three examples from our programmes

A lasting change in the life of a woman or a girl: it is ambitious, but for Simavi it is essential. Our programmes are built to be holistic and sustainable, since we do not believe in short-term or isolated problem solving. Impact is usually perceived as positive, but can unintentionally be negative. We take documentation of negative impact seriously to ensure we do no harm and take action to mitigate it.

Country Uganda

Partner WASEU

Programme WASH SDG

UNINTENDED NEGATIVE IMPACTS ON WASH ENTREPRENEURS

Simavi supports women to become WASH entrepreneurs. This improves WASH service provision for more accessible and inclusive services and creates an enabling environment for economic empowerment.

Over the first two years of the WASH SDG programme the number of female WASH entrepreneurs increased from 10 to 231 of the 356 entrepreneurs in total. They are WASH service providers or produce hygiene products. Although these figures seem encouraging, it became clear that the women involved face additional challenges because of their new role as entrepreneur. Female entrepreneurs indicated that their new business led to an increase in violence and abuse by their husbands. Women said that their partners fear that entrepreneurship will make them more independent and less obedient, which leads to more conflict and violence in the household. In the male dominated WASH sector, female entrepreneurs also face more discrimination and difficulties in challenging traditional norms and customs then in less male dominated sectors. This often resulted in loss of motivation to do business.

Women started to share their mixed experiences during the regular monitoring field visits. The WASH forum was established to enable women to meet and share their experiences openly and confidentially. Women entrepreneurs identified a need for more comprehensive business support with long term mentorship to compete in the male dominated market place, for support on how to navigate gender-based violence, and for their male counterparts to be more supportive instead of a source of violence and confusion.

WASEU always conducts follow-up business mentorship visits. In this case a tool was developed to mentor entrepreneurs more intensively over a longer period of time. The WASH forum also helped women to join forces to seek more collective support. Women organised themselves for additional training based on shared needs. Issues related to gender based violence were raised and discussed with a district focal person for gender. At the same time, we are in the process of gathering funds to incorporate more gender related training for women entrepreneurs.

On some occasions, our interventions can have unintended or negative impacts. We acknowledge that some changes may be unintended or negative.

Our definition of impact: the lasting change in the lives of women and girls – in relation to our mission and their own perspectives – that results from Simavi’s efforts.
We notice a significant decline in India, which was confirmed through a rigorous test against a control group. These findings place our work in a small group of rigorously designed and implemented programmes that have demonstrated effectiveness in reducing child marriage. Information from Bangladesh indicates a comparable rate of child marriages and very little room for women to make their own decisions on SRHR. We will continue to strive for lasting change there as well.

Note: Due to Covid-19 we experienced delays in evaluation in Malawi. The findings are still being processed and may lead to additional insights and reflections on the impact of our work.

Lily Behera

My name is Lily Behera and I live in a village called Danapur with my parents and three siblings. I joined a girls group from More Than Brides in 2017 as an adolescent group member. Within six months I became the discussion leader of my group. However, the very next year I faced a setback as my family received a marriage proposal for me. I was just 17 years old at the time. My future seemed hopeless as my family seriously considered the early marriage proposal due to our weak financial situation.

‘With the support of my fellow adolescent group members, I somehow found the courage to reject the early marriage proposal. Instead, I insisted on continuing my education. It was no less than a miracle when I was finally able to convince my parents to reject the proposal. Not only was I able to continue school, but I also got the opportunity to follow a certificate course on computer application conducted by VHAI. After completing the course, I found a part-time job as a data entry operator in a local Kiosk Bank, which gave me an income of INR 3,000 per month. I not only became independent, but I was also able to support my family.

‘As I continued my role as a discussion leader of my adolescent group, an official from Odisha Livelihood Mission happened to see me taking a session for adolescent group members. He was impressed with my presentation and encouraged me to apply for the post of Cluster Level Resource Person in the Odisha Livelihood Mission. Motivated by his kind appreciation, I did apply for the position and with the unanimous support of the villagers, I was selected. Today I hold a respected job in my own village. Once seen as a burden, I am now a financial support for my family. I can say with confidence that the power of self-belief and determination can do anything!’

Lily Behera (19), Danapur, India

Not only was child marriage averted, but Lily was empowered to make her own decisions, opening up opportunities which enabled her to grow in confidence, gain more control through her financial independence, and obtain social support from her peers as well as appreciation and respect from the wider community.

**Examples of progress**

**SDG 5.3.1.**
Proportion of women who were married or in a union before age 18

**INDIA:** 16% of girls in 2016, falling to 4% of girls in 2020

**BANGLADESH:** 19% in 2020 (target 14% in 2022)

We notice a significant decline in India, which was confirmed through a rigorous test against a control group. These findings place our work in a small group of rigorously designed and implemented programmes that have demonstrated effectiveness in reducing child marriage. Information from Bangladesh indicates a comparable rate of child marriages and very little room for women to make their own decisions on SRHR. We will continue to strive for lasting change there as well.

Note: Due to Covid-19 we experienced delays in evaluation in Malawi. The findings are still being processed and may lead to additional insights and reflections on the impact of our work.
Avenita Surya, originally from Flores Island, Indonesia, had her first menstruation at 12 years old. She was not afraid as her mother has explained her about it: she told her daughter to prepare a cloth to absorb the blood, to stay away from boys and men and to not wash her hair during menstruation. Avenita, mute since birth, was not able to ask many questions.

When the pandemic hit in early 2020, it impacted the income of her family. Avenita and her husband both lost their jobs. It was a stressful situation for her, given her physical condition and lack of financial support. She was invited to join the Perfect Fit tailor training conducted by Kopernik in Labuan Bajo. She was trained to manufacture reusable pads together with other female tailors and was educated about menstruation.

This was a big relief for her during the pandemic, as she now has a new job to help the family income as well as new knowledge about menstrual health. Avenita now understands that it is okay to wash her hair during menstruation and that it is also important to stay clean and healthy during menstruation. The programme includes a Facebook discussion group, where all the questions she had during her teenage years were answered, including those about closeness with boys and men during menstruation, as long as there is consent among those concerned.

Avenita is now able to finance her children’s education and save money for the family. Her knowledge about producing reusable pads and SRHR topics gives her great confidence. The contact she has with the other female tailors makes her very happy, and she says that these women feel like a new family, a new home, and she is grateful for that. She hopes that the work of the Perfect Fit programme can be sustained so that many disabled women like her can be reached and empowered.

Impact in practice

Programme Perfect Fit

FROM TABOO TO A LIVING: MENSTRUATION MEANS MORE

Avenita Surya, originally from Flores Island, Indonesia, had her first menstruation at 12 years old. She was not afraid as her mother has explained her about it: she told her daughter to prepare a cloth to absorb the blood, to stay away from boys and men and to not wash her hair during menstruation. Avenita, mute since birth, was not able to ask many questions.

When the pandemic hit in early 2020, it impacted the income of her family. Avenita and her husband both lost their jobs. It was a stressful situation for her, given her physical condition and lack of financial support. She was invited to join the Perfect Fit tailor training conducted by Kopernik in Labuan Bajo. She was trained to manufacture reusable pads together with other female tailors and was educated about menstruation.

This was a big relief for her during the pandemic, as she now has a new job to help the family income as well as new knowledge about menstrual health. Avenita now understands that it is okay to wash her hair during menstruation and that it is also important to stay clean and healthy during menstruation. The programme includes a Facebook discussion group, where all the questions she had during her teenage years were answered, including those about closeness with boys and men during menstruation, as long as there is consent among those concerned.

Avenita is now able to finance her children’s education and save money for the family. Her knowledge about producing reusable pads and SRHR topics gives her great confidence. The contact she has with the other female tailors makes her very happy, and she says that these women feel like a new family, a new home, and she is grateful for that. She hopes that the work of the Perfect Fit programme can be sustained so that many disabled women like her can be reached and empowered.

Impact works in multiple dimensions: width (reaching as many people as possible) and depth (a profound or big change for fewer people). This case shows how knowledge, letting go of taboos, a social network, employment, empowerment and the recognition of the needs of a disabled woman can have a lasting effect on her well-being – and that of her family and community. In 2020 more than 10,000 pads were made locally by the female tailors in Labuan Bajo, giving 3,991 women and girls access to use of the products.
The welcome increase in attention to the Black Lives Matter movement and subsequent worldwide discourse on racism and discrimination triggered a discussion within our organisation as well. There are many linkages to the work we do. How do we, as a Dutch organisation, relate to the deep-rooted issues that were raised by the Black Lives Matter activists?

**95 years of history: from colonial heritage to human rights**

We work from a human rights-based perspective. This means that human rights norms and principles such as participation, equality and non-discrimination are central to the way we work. The aim of our work is to reduce inequalities, to reach those who are excluded and invisible and make sure they are able to fulfil their potential for a healthy life.

The foundation of our organisation, however, is rooted in inequality. Simavi was established in 1925 with the aim of bringing better healthcare to the then Dutch colony of Indonesia. Although some things have changed, the power balance between our ‘Northern’ organisation and the people we work with in Africa and Asia is still skewed. To name a few things:

- It is much easier for an organisation like ours – with its networks in the Netherlands – to access international funding than it is for African or Asian organisations.
- Job openings in our organisation, although they open to everyone and diversity is encouraged, could be harder to obtain for Africans and Asians because of informal networks, cultural differences, migration and permit issues, and language barriers.
- Strategic decisions are made by a Dutch board and management team, which means that African and Asian colleagues, partners and communities are not always able to participate in these processes.

We feel it is important to be honest and transparent about all of the above, particularly as we want to change. That being said, there are also many steps we have taken so far:

- **An inclusive and women-centred approach**
  In our work, we start by defining together with the women themselves which interventions are needed. This is what we call our women-centred approach. Moreover, inclusion is integrated into all our work. We have developed several tools to improve both gender and social inclusion in practice and policy, making sure we leave nobody behind.

- **Partnerships**
  We work with 62 organisations in 10 countries, with excellent expertise in WASH and SRHR. These representatives of their communities have the networks and knowledge of the local context that is of critical importance to the work we do. In recent years, we have been striving to live up to our organisational value of being more just in these partnerships and to work towards global leadership.

- **Powerful communication**
  In our communication, we aim to steer clear of stereotypical and one-dimensional images. We focus on showing the actual change in the lives of the women and girls we work for. For fundraising, this can create moral dilemmas. People have limited time and attention, and care about a number of different causes. This means that appeals need to be clear and simple and aimed straight at the heart of the recipient if they are to trigger a response to support our organisation. Showing urgency can mean showing people at their most vulnerable or in traditional gender roles. Even if those people give their consent, Simavi feels that such representations do not fit the current zeitgeist. We have therefore created a more optimistic and powerful visual language that demands a longer attention span from our audience.

**Work to do**
We realise there is still more work to do before we can speak of a real power balance and true inclusion. We will continue to challenge ourselves and reflect on what we do well and what we can do better; be as transparent about the issue as possible; listen to and learn from others; and most importantly, consult our partners and the women and girls we work with about their needs and what value we can add to achieve a lasting positive change in their lives.

**Very 2020...**

Sara Ahrari, inclusion expert at Simavi about what we already do and what we can do better when it comes to equality:

The aim of our work is to reduce inequalities, to reach those who are excluded and invisible and make sure they are able to fulfil their potential for a healthy life.
The results of our programmes

In this chapter we report on our achievements towards the outcomes stated in our Theory of Change, on how impact is realised – and how our programmes are designed to make a lasting change. Although we implement programmes of different shapes and sizes, they all contribute to one or more of these outcomes, which are essential pathways to achieve impact.

For each of the five outcomes, we describe our approaches, highlight one story that illustrates the results achieved under this outcome and present outcome data from programme evaluations.

How do we get to our results? Our Theory of Change summarises our way of working. Starting from the left, we identify the main actors that play a role in our programmes. Women and girls are in the centre as they are central to everything we do. But because women and girls do not live in isolation, men and community stakeholders play a key role in our programmes too. In addition, we work with public and private service providers as well as local and national governments to ensure access to services as well as a women-friendly policy environment.

Next are the strategies, in which our in-country partners play a key role. We currently have 62 established and long-term partnerships on the ground in 10 countries. They are our veins into the communities, and are at the frontline of the work we do. We summarise our main approaches in five strategies. As can be seen from the lines, these involve different actors and contribute to several outcomes. This is key to a Theory of Change: it is not linear. The five outcomes in the next column identify the five areas of change we believe are essential to women and girls being able to pursue their right to health: our impact.

This is how we contribute to our mission: a healthy life for all.

We believe that two factors are crucial in achieving health for women and girls: sexual and reproductive health and rights (SRHR), and water, sanitation and hygiene (WASH). All our work focuses on these two areas of health. To provide further focus in our work, we have identified five expertise areas that combine our specific expertise on SRHR and WASH with our focus on women and girls: Menstrual Health, Maternal Health, Bodily Integrity, Water and Sanitation, and Hygiene.
The results of our programmes

Equality and safety is the norm

To a large extent, cultural and social norms define how people behave and interact. For example, norms might prescribe that men decide what the household income is spent on or that women and girls are not allowed to cook while menstruating. To create space for women to become more socially and economically empowered, learn and practice new skills and access services, it is important that norms and practices are supportive.

How do we work on this?

➔ We create space for dialogue and reflection between women, within communities, with service providers and with key government and other stakeholders.

➔ We enhance the knowledge and skills of women and girls – and the people around them – on topics such as SRHR, WASH, gender equality and human rights.

➔ We work with change agents and role models who can spearhead change in their communities.

Case study

Country: Malawi
Partner: YONECO
Programme: GUSO

TELLING THE UNTOLD STORIES: HOW SEXUAL VIOLENCE IS NO LONGER THE NORM

Naomi (her real name has been withheld for privacy reasons) is a 16-year-old girl from Nankumba, Malawi. Naomi is one of many adolescent girls who are defiled by older men. Rape and defilement cases usually go unreported and Naomi did not perceive her ordeal perpetrated by her uncle as a special case. It remained a secret until two months later when it was noted that Naomi was pregnant. Naomi’s mother and other older women were eager to know who was responsible for the pregnancy. However, when it became clear that Naomi’s uncle was responsible, the women dropped the matter.

Naomi listened to a radio programme in which the members of Nankumba Youth Radio Listening Clubs and other young people from the area were speaking out against harmful cultural practices. Naomi then realised that what her uncle had done is punishable by law, and that she was also exposed to the risk of HIV. Naomi approached the Radio Listening Club and the matter was quickly referred to the authorities. The case went to court and her uncle was sentenced to 14 years imprisonment.

This case opened up a Pandora’s box. Many further cases came up, which were reported to the authorities either directly or through the Radio Listening Club. The Club has now become an icon and mouthpiece for the youth in the area.

Sexual gender-based violence (SGBV) cases are so deeply rooted in sociocultural norms that most girls did not report such incidents – and those who did were simply dismissed by adults. Despite having the legal and policy environment for protecting the rights of young people, community members were not aware of the illegality of SGBV. Under the GUSO Programme, YONECO empowered young people with knowledge and skills on how they can raise awareness as well bring to light issues that affect young people. A total of 15 Radio Listening clubs have been established to raise awareness about young people’s rights, amplify their voices and provide a mechanism for signalling various SRHR violations.
Susan Anying works as a tailor in Agogo, Uganda, and is now making face masks to fight Covid-19.

**Examples of progress**

**ON NORMS AND VALUES**

In general, we see a positive trend in gender norms, although it varies from country to country. In Uganda, we saw a growing trend of conservatism and clinging to traditional norms, which we could not counteract. In Malawi, overall changes in attitudes were positive, including less acceptance for violence, but norms around women’s general position towards her husband have shown no significant change. Joint decision-making on contraceptives and pregnancies is still a challenge, and progress is slow. Decisions are often still not made together, let alone by women independently. In Ghana we saw more improvement than in Tanzania. Altogether, the quality of health services is generally better in Ghana and the starting point in Ghana was more positive, which could have accelerated a change in norms. Partners in Ghana also put more emphasis in their activities on changing reproductive health norms.

In most countries men hold the decision-making power and decide what the household income is spent on. This means women often do not have access to or control over assets (such as tools that are needed to make a product that can be sold) and resources (cash or a loan). Being economically empowered enables women to access SRHR and WASH services and products and make their own decisions. It also influences women’s status within their families and communities.

**How do we work on this?**

- We train women in financial literacy and provide them with relevant skills to generate an income.
- We support women to organise saving groups and expand their network.
- We engage with men and key stakeholders to bring about a shift towards gender equality and to gain their support for women’s economic empowerment.
Muna Adhikari is a young technician involved with Mini Lab Barahatal, a water quality testing lab in Badichaur, Surkhet, Nepal.

Changes on outcome levels

The results of our programmes

‘I knew little about savings and loans and I was hesitant about it. I feared that my property could be confiscated if I took out a loan. However, I decided to join the EASE women’s savings and loan group after the supervisor of the group came to my house and explained the Golden Line programme to me. I realised that this group is different from other savings and loan groups, because we get the opportunity to learn about important things, such as family planning and business skills.

‘In the group I meet with other women from my community and we have become like relatives. The group’s emergency fund helps a lot when one of our members has a problem. In the gender discussion series we talked about the difference between needs and wants. After that, I decided to use the money I am saving in the group to build a house on the small plot of land that I own. After the first share out I started the building work, which I aim to finish after the second share out. I am planning to rent the house to earn money. Owning the house will also help me to access a larger loan from a bank.’

Zawadi Robert, member of the women’s savings and loan group, Golden Line programme, Geita, Tanzania

THE DIFFERENCE BETWEEN NEEDS AND WANTS

Examples of progress

IN WOMEN’S ACCESS TO RESOURCES:

Our work contributes to the economic empowerment of women living in and around artisanal and small-scale gold mining communities in Tanzania. Its aim is a world where men and women are treated as equally important and where women have control over their lives and their bodies.

We put a lot of emphasis on promoting female economic empowerment and entrepreneurship and we see a big boost in uptake of women entrepreneurship, sometimes way beyond our expectations. That said, current evidence does show a big gender gap in generated income; in Bangladesh male entrepreneurs earn roughly four times as much as their female colleagues. In Uganda the number of WASH related enterprises has nearly doubled from the initial very low numbers in the remote areas of Agago. Much has improved for women, but general financial security remains relatively low (especially in Tanzania). Savings groups give access to loans and social support, but access to larger credit and training is required to further strengthen access and control over resources.

IN TANZANIA:

69% of women state that their financial security has improved (compared with 2019)

73% of women experienced positive changes in financial decision-making in the household (compared with 2019)

Women engaged in economic activities:

2017 = 68%
2020 = 93%

IN GHANA:

98% of women experienced positive changes in financial decision-making in the household (compared with 2019)

81% of women stated that their financial security has improved (compared with 2019)

Women engaged in economic activities:

2017 = 82%
2020 = 99%

IN BANGLADESH:

Women engaged in economic activities

2018 = 0%
2020 = 26%

IN NEPAL:

Women engaged in economic activities

2018 = 0%
2020 = 13%

IN UGANDA:

Women engaged in economic activities

2018 = 11%
2020 = 65%

In the areas where we work, the percentage of women WASH entrepreneurs in the local WASH market increased:

BANGLADESH: 2018 = 0%
2020 = 26%

NEPAL: 2018 = 0%
2020 = 13%

UGANDA: 2018 = 11%
2020 = 65%

Changes on outcomes levels

The results of our programmes

Men are often the main decision-makers in households and the communities where we work. As women have different needs from men, it is important that these needs are included in decisions on both water, sanitation and hygiene and on sexual and reproductive health facilities and services. This is why Simavi works with women and girls as well as decision-makers and decision-making bodies – to ensure women’s voices are heard.

How do we work on this?

➔ We ensure women have the right knowledge, skills and tools to actively participate in decision-making at both household and community level.

➔ We strengthen the capacity of local civil society organisations (such as women’s rights organisations) so they are able to represent women and girls in decision-making and lobby for their rights and needs to be met.

➔ We enhance the knowledge and skills of husbands and decision-makers so that they support women taking part in decision-making.

Making sure all voices are heard

Case study

Country: Bangladesh
Partner: DORP
Programme: Watershed

SPECIAL NEEDS FOR WATER: REPRESENTED

“Inclusion was a key priority on the agenda of the Watershed programme, which finished in 2020. In the Bhola region transgenders are a particularly marginalised group and are excluded and stigmatised. Including this group in the Water Management Citizen Committee (WMCC) presented a dual challenge: the transgender community itself was initially unwilling to participate because they were afraid they would not be accepted, while the members of the WMCC were reluctant to open up to the transgender representatives. Consequently, in the first two years transgenders were not included in the WMCC.

‘DORP argued for open communication and sought to convince the transgenders and the members of the WMCC to talk to one another so as to better understand each other’s needs. Most of the demands of the transgender community were similar to women’s needs, but transgenders face additional challenges. When they go to fetch water, they are often asked to do so quickly or come back another time. This means they sometimes walk long distances to remote water points to avoid stigmatization and being sent away. Their demand was to install a tubewell sunk where they live, which was granted but is still awaiting formal registration procedures. Greater representation of excluded groups means that they can better voice their needs.”

Partha Sarathi Kuntal, Programme Coordinator, DORP, Bangladesh

Excluded groups, such as transgenders, need to be heard

On 20 May 2020, the local WMCC in Bhola, Bangladesh was represented by 37 members, of which 13 were women (35%) and one was transgender (she), compared with 6 women (24%) among 25 members in 2017. Simavi’s partners have repeatedly emphasised the importance of gender and social inclusion in their training activities, consultation meetings and advocacy with local civil society organisations.
To pursue their right to health, it is important that women and girls have access to SRHR and WASH services that respond to their specific needs. Simavi works with public and private service providers to ensure that services are available, accessible, acceptable – without discrimination. For women and girls to use these services, they must be aware of them and recognise the importance of using them – and of course they must have money to pay for them and for transport. Moreover, they must be allowed to make use of these services by the people around them, as social and cultural norms might restrict them from using services. In bringing together both the demand and supply sides, we ensure the sustainability of SRHR and WASH services.

How do we work on this?

→ We train service providers to deliver services that respect and respond to the needs of women and girls.

→ We ensure women are meaningfully engaged in decision-making structures, such as WASH committees.

→ We provide training and support to women and communities on demanding services using social accountability methods.

→ We promote a variety of social accountability tools for quality services to respond to women’s and girls’ needs.

Examples of progress

IN WOMEN’S ABILITY TO PARTICIPATE AND VOICE THEIR PRIORITIES

We have seen an increase in the level of participation of women and girls in decision-making about WASH activities (position on the participation ladder, scale 0–100):

<table>
<thead>

<tr>
<td>Outcome 2: To pursue their right to health, it is important that women and girls have access to SRHR and WASH services that respond to their specific needs. Simavi works with public and private service providers to ensure that services are available, accessible, acceptable – without discrimination. For women and girls to use these services, they must be aware of them and recognise the importance of using them – and of course they must have money to pay for them and for transport. Moreover, they must be allowed to make use of these services by the people around them, as social and cultural norms might restrict them from using services. In bringing together both the demand and supply sides, we ensure the sustainability of SRHR and WASH services.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Outcome 3: How do we work on this?</th>
</tr>
</thead>
<tbody>
<tr>
<td>How do we work on this?</td>
</tr>
</tbody>
</table>

→ We train service providers to deliver services that respect and respond to the needs of women and girls.

→ We ensure women are meaningfully engaged in decision-making structures, such as WASH committees.

→ We provide training and support to women and communities on demanding services using social accountability methods.

→ We promote a variety of social accountability tools for quality services to respond to women’s and girls’ needs.
**Community Ownership for Sustainably Improved Healthcare**

An emerging issue in the Bogu community in Gushegu municipality was the lack of accommodation for a midwife at their health facility, which made it difficult for the midwife to be available for deliveries, especially at night. During an action planning session, the community decided to build a three-unit accommodation facility using locally available materials.

The community built the accommodation and a philanthropist provided assistance with the roofing and plastering. This inspired the community to write a letter to ask for funds to complete the structure, and as a result another philanthropist stepped in. The facility is now almost complete and the Bogu community has a midwife available to ensure safe deliveries, even at night.

Social accountability is a very important strategy in our programme implementation. By using the community scorecard tool, we allow communities and health facilities to discuss key issues that could be depriving people of access to quality services. This example is one of the issues that was raised and solved by the community, following the social accountability strategy.

**Examples of progress in women’s ability to make use of sustainable SRHR and WASH services**

Although the SDG 6 indicators used by the Joint Monitoring Programme (WHO/UNICEF) are not gender-specific, our gender-disaggregated data suggest that men and women make more or less equal use of water and sanitation services, including hand washing, which suggests that once a household has access, both husband and wife make use of the facilities. A noticeable trend is the increased uptake of hygiene practices in both Bangladesh and Uganda (and moderately in Nepal too), which has been boosted by the introduction of Covid-19 measures and messages featuring handwashing as a prominent line of defence. Although our aim is to reach the poorest communities, which are most at risk of being left behind, our midline data shows most progress in the richer segments. The poorer communities are improving, but from a much lower starting level.

In Ghana and Tanzania we saw a general increase in the uptake of health services in all areas, but uptake varied between facilities. In some health facilities, the documentation of uptake was improved, which could be the reason for at least some of this increase in recorded uptake. Access to services in Malawi was already high. Good progress has been made in Uganda: the in-depth end-line study shows a big increase in the use of SRHR services and a decrease in the numbers of young people unable to access these services. Indonesia is an exception because of the restrictive environment for unmarried people to use SRHR, which was exacerbated by the closure of services due to Covid-19.

### SDG 6.1.1

**Proportion of people who use basic or safely managed drinking water services (SDG ladder):**

**UGANDA:**
- 2018 = 29%
- 2020 = 55%
  - Of which 51% female

**BANGLADESH:**
- 2018 = 82%
- 2020 = 90%
  - Of which 51% female

**NEPAL:**
- 2018 = 89%
- 2020 = 91%
  - Of which 51% female

### SDG 6.2.1a

**Proportion of people who use basic or safely managed sanitation services (SDG ladder):**

**UGANDA:**
- 2018 = 40%
- 2020 = 69%
  - Of which 51% female

**BANGLADESH:**
- 2018 = 48%
- 2020 = 65%
  - Of which 51% female

**NEPAL:**
- 2018 = 81%
- 2020 = 85%
  - Of which 51% female

### SDG 6.2.1b

**Proportion of people who reach basic levels of hand washing practices of the SDG ladder:**

**UGANDA:**
- 2018 = 10%
- 2020 = 36%
  - Of which 50% female

**BANGLADESH:**
- 2018 = 9%
- 2020 = 56%
  - Of which 51% female

**NEPAL:**
- 2018 = 60%
- 2020 = 61%
  - Of which 50% female

### Percentage increase in uptake of SRH services:

**GHANA:**
- 2020: 90% increase compared to 2017 data from 7 health facilities

**TANZANIA:**
- 2020: 61% increase compared to 2017 data from 2 health facilities, 1 mobile clinic

### Percentage of young men and women that have not yet used SRH services, but wanted to use them (excluding those who had no need for these services):

**GHANA:**
- 2016 = 17%
- 2020 = 7%

**INDONESIA:**
- 2016 = 20%
- 2020 = 37%

**MALAWI:**
- 2016 = 5%
- 2020 = 2%

**UGANDA:**
- 2016 = 44%
- 2020 = 17%
To sustain our work, it is important that women-friendly policies are in place and implemented at national and local levels. At the same time, international instruments, such as new resolutions, should also adequately articulate women’s needs as these present a strong basis for further translation into national policies.

**Outcome 1**

**Lasting change by women-friendly legal framework**

To sustain our work, it is important that women-friendly policies are in place and implemented at national and local levels. At the same time, international instruments, such as new resolutions, should also adequately articulate women’s needs as these present a strong basis for further translation into national policies.

**How do we work on this?**

- We inform women and girls about their rights and support them to claim their rights.
- We strengthen the capacity of local civil society organisations and provide them with knowledge and tools to lobby government authorities to uphold their legal obligations.
- We support duty bearers (governments, service providers, corporate sector) to fulfil their existing obligations.
- We lobby with national and international stakeholders to ensure needs are represented in new legislation.

**Outcome 2**

**Outcome 3**

**Outcome 4**

**Outcome 5**

Women-friendly policies in place and implemented

In India, our lobby and advocacy strategy focused on having strong political, financial and public support at local, national and international level to reduce the percentage of child marriages and its adverse effects on young women and girls. Women’s groups campaigned against child marriage, dowries and violence against women, and awareness was raised in communities about legal rights, laws and law enforcement. In Odisha, a state in India, caste societies developed a resolution to verify proof of age before consenting to marriage. In addition, local government members declared child marriage-free villages.

Policy change is a process that often takes many years and depends on many external factors, such as political dynamics and momentum for change. With the closure of our MTBA programme, this case shows our achievements at the local level. The number of real changes in policies and regulations may be small, but their effects can be far-reaching and sustained for many years to come as it helps women and girls to claim their rights to decide who and when they marry.

**Case study**

ADVOCATING WOMEN’S REPRESENTATION IN POLITICAL AND ECONOMIC SPACES

In Ghana, our lobby and advocacy aimed to strengthen women’s participation in decision-making. In 2019, the government approved the Affirmative Action Bill, which was pushed for approval by the gender minister. The bill contains provisions on equal opportunity for women and reserves at least 40% of government and other appointments for women. As part of the Affirmative Action Bill Coalition, our partners advocated for equal representation of women in political, public and private sectors, actively lobbied the gender minister and presented a petition to the president to pursue the passage of the bill. After approval of the Affirmative Action Bill, our partners continued to call on the government to pass it into law and for a policy stipulating that 30% of all mining concessions go to women. As part of the coalition, our partners shared videos, publications and press statements. More work remains to be done as the bill has not yet been passed into law by Parliament.

These policies and regulations will help women and girls to claim their rights and have a seat at the table where decisions are made. Although difficult to pinpoint now, the long-term effect of creating an enabling environment supportive of women’s rights and priorities, cannot be underestimated.

Examples of progress
WITH THE ADOPTION AND IMPLEMENTATION OF WOMEN-FRIENDLY AND INCLUSIVE POLICIES

The final year (2020) of Watershed – despite being a tough year for governments and communities alike, with their attention focused on the global pandemic – still brought about several positive changes, building upon four years of investment. In Bangladesh the approval of the revised Pro-Poor Strategy for Water Supply and Sanitation Sector in Bangladesh in June 2020 was one such positive outcome. In Bangladesh, the majority of the poor are women, so a pro-poor strategy for WASH would ideally benefit them. Although the strategy fully aligns with the pledge to leave nobody behind, as stated in the SDGs, and provides for a 100% subsidy to WASH services for the poorest and marginalised people, it does not highlight specific gender strategies or respond to the particular barriers encountered by women, and especially households headed by women, in terms of access to water and sanitation.

Number of laws, policies and norms implemented for sustainable and inclusive development in water and sanitation services:

Brechje Oonk, public affairs officer at Simavi about climate change and how it directly affects our work:

In recent decades the world has been shaken by evidence of climate change and the far-reaching consequences have been discussed extensively in international forums. In 2015, this resulted in the Paris Agreement, which was adopted by most countries and aims to reduce greenhouse gas emissions and build resilience for adapting to the impacts of rising temperatures.

Within Simavi there have been ongoing discussions on whether climate change is related directly to our work on WASH and SRHR. In March 2020 a focus group researched the potential linkages between Simavi’s core areas and climate change.

**It’s all connected**

Climate change affects us all. However, it does not affect us all equally. The countries least responsible for the increase in carbon dioxide are also the most vulnerable to its effects. Ninety per cent of the problems caused by climate change are water-related, such as drought, flooding and heatwaves. The greatest risks and vulnerability to climate change are experienced by young people and older adults, disabled people, ethnic, gender and sexual minorities, and poor communities. Within these population groups, it is women and girls who bear the brunt, which further widens gender inequalities.

For example, women and girls will have to walk further to fetch water due to the decreasing availability of safe and clean water. That means that they cannot spend that time on education or economic activities.

**Our added value**

Simavi is in an excellent position to fight the negative impact of climate change on WASH and health and promote and advocate equal access to water sources and sanitation services and facilities. We have decades of experience in community mobilisation through local partners in some of the world’s most vulnerable regions. In addition, Simavi has extensive experience in influencing global, national and local WASH and SRHR policies, engaging with public and private service providers and mobilising communities, focusing on women and youth.

Another, strong added value for Simavi is its people and women-centred approach. Simavi’s work is closely aligned to adaptation efforts and helps to increase resilience and reduce inequalities. Simavi can explicitly link its expertise areas to certain effects of climate change by addressing how climate change drives health disparities and gender inequality and increases SRHR risks. Besides, by working with communities in vulnerable situations we can bring local data and realities to global conversations and we can raise marginalised people’s voices.

**Water & inequality at the heart of climate change**

- 90% of all natural hazards are water-related.
- 2 billion people are currently experiencing water stress.
- 2.2 billion people do not have safely managed drinking water services and 3 billion lack basic handwashing facilities.
- Women and girls are responsible for water collection in 8 out of 10 households with water off premises, so reducing the population with limited drinking water services will have a strong gender impact.
- Climate change has led to an increase in non-partner sexual violence associated with fetching water far away from the house or community and power abuse by water source managers.

'As we collectively address our climate emergency, we need everyone at the table. This includes the meaningful inclusion of youth, women and indigenous peoples. No voice, and no idea for a solution, should be left unheard.'

António Guterres, Secretary-General of the United Nations (February 2021)
**How do we organise ourselves?**

Where does our money come from? How do we spend it? Who do we work with? What risks are we aware of, and how do we protect ourselves? Impact starts with a healthy organisation.

---

**Where does our money come from?**

We are proud of every euro invested in our work. In 2020 Simavi generated an income of €27.6 million. Income from private individuals amounted to €2.6 million, some €1.0 million more than budgeted. This additional million euros consists mainly of revenues from legacies and bequests, which was not budgeted due to the uncertainty of such income. Revenue from lotteries, companies and non-profit organisations amounted to €1.6 million, €0.4 million under budget, which is mainly due to lower income than expected from foundations (€0.3 million). Government subsidies made up €23.4 million of our income, €4.4 million more than budgeted, which is mainly due to the timing difference between receipts and transfers of funds for alliance partners.

Government subsidies include grants from Dutch embassies and tenders awarded by the Dutch Ministry of Foreign Affairs and other governments. Of the total amount of €22.4 million, €14.1 million was received by Simavi as the lead agent of several alliances. This amount was paid out directly to the consortium partners.

**Fundraising in 2020**

Raising funds that help us realise our impact is a continuous and ever-changing task and we are always on the lookout for new opportunities and ways to diversify our funding. Our four main fundraising priorities in 2020 were to:

1. increase our visibility with potential donors;
2. diversify our donor base and explore new types of partnerships;
3. increase revenue from our Dutch constituency by intensifying our relationships with individual donors, the Dutch private sector and Dutch foundations;
4. explore new ways to raise funds.

---

**GRATITUDE**

ARIETTE BROUWER, managing director: ‘The personal and professional relationships we have with our donors are deep and warm. We see them as true partnerships in which we work together to achieve our mutual objective: a healthy life for all. While the major grants allow us to design and implement big programmes, the unrestricted funds are just as vital for running our organisation, investing in programme quality, fundraising campaigns and for the opportunity to initiate important learning programmes.’

---
Fundraising activities

Institutional fundraising
• To support our fundraising efforts, it is important that donors and other players in the sector know Simavi and what we stand for. Attending international forums and conferences is one way to strengthen our network and profile. Due to Covid-19 this has been a special year and all conferences and meetings were either cancelled or online. This created a unique opportunity to engage our partners in global conferences and showcase our work to a broader audience. Simavi, in collaboration with Girls Not Brides, the Global Partnership to End Child Marriage, the More Than Brides Alliance, Her Choice Alliance and Partners for Law & Learn programme. Corporate and business partnerships are truly meaningful when the relationship is not just built on donations, but on creativity and reflectivity. With a renewed strategy on the business partnerships we look forward to the next years.

Partnerships with the private sector
• Simavi works in partnership with different Dutch and International business partners. These partnerships are based on a set of shared ambitions, from which we create shared value and strive for impact in the field we work in. As a valued long-time partner Dopper continued to work with us in Nepal where we jointly improve health and hygiene standards. In the Netherlands, we worked together with our partner The Good Ro, raising awareness for WASH. Together with Made Blue, we create access to water for rural communities in Tanzania and Uganda in the WASH & Learn programme. Corporate and business partnerships are truly meaningful when the relationship is not just built on donations, but on creativity and reflectivity. With a renewed strategy on the business partnerships we look forward to the next years.

Unrestricted funds
Individuals who support us (private donors) are of great importance to Simavi. They allow us to finance a big part of our daily work, but also to strengthen our visibility and contribute in other ways that support our mission. In 2020 we received financial support from more than 42,500 private donors. Gross turnover from private donors has been almost stable around €1.8 million euros, which was mainly due to improved response rates to our direct mail campaigns and higher average donations. Following the Covid-19 restrictions, we stopped our door-to-door acquisition in mid-2020, but fortunately more than 200 HER Film Festival visitors supported us by making a structural donation after visiting the online festival.

More than a quarter of our income from private donors derives from legacies. We are very grateful that so many people add Simavi to their will, and it’s an honour to work in their spirit. In 2020 we received €737,000 from legacies.

Events
2020 has been a challenging year for events due to the Covid-19 restrictions. Two main fundraising events were planned throughout the year: Wandelen voor Water (Walking for Water, our school event organised with 2OA, AMREF, Rotary Netherlands and other supporting partners) and Hike for Health (an adventurous challenge with Simavi supporters in Nepal).

• Wandelen voor Water
Wandelen voor Water was planned in March 2020, but was almost completely cancelled as schools closed down and social distancing restrictions were imposed. We therefore received little income from this in 2020, but luckily many schools did sign up for the 2021 edition. In 2020 we developed digital Covid-19 proof alternatives for upcoming editions. In September 2020 Simavi took over the brand ownership of Wandelen voor Water, which gives us the opportunity to grow the event further.

• Hike for Health
This new event premiered in 2019. It is a sponsored hike in the mountains of Nepal during which the participants visit Simavi projects. In 2020 a number of Hike for Health events were needed to accommodate all the volunteers. In February 2020 we went to Nepal with two groups (43 participants in total) from our partner Dopper. They raised €135,000. In March we went with 13 participants to Nepal. This group raised €40,000. Unfortunately, due to the emerging Covid-19 pandemic, we had to travel back to the Netherlands one day earlier than planned. The next group that was planned (starting 25 March with 18 participants) were unable to travel to Nepal, but they had already raised €57,000. This trip has been postponed until further notice.

Partnership with the National Postcode Lottery
The Dutch Postcode Lottery raises funds for charitable organisations committed to a greener and fairer world. Simavi has been one of the Lottery’s beneficiaries since 1998. In 2020 we received a general grant of €900,000. This support is particularly valuable to us, as it can be used for additional investments to increase the impact of our programmes.

Furthermore, the partnership with the Dutch Postcode Lottery gives us the opportunity to create public awareness of the need for access to water, sanitation and hygiene, all the more important now the Covid-19 crisis has increased the lack of proper hygiene and sanitation worldwide. During the Dutch television show Koffietijd, ambassador Leonne Stentler explained more about this theme, using Simavi’s GIRLS POOP TOO campaign as the entry point.

GRATITUDE
FERNANDO VAN DER BRUG, director of private fundraising:
‘It is really rewarding to see how committed our supporters are. Every day we receive heart-warming messages from donors who find our work so urgent during the pandemic and who even want to take an extra step with us. That makes our work even more valuable. Our team works with a lot of passion to engage people even better in our work and organisation.’

The Dopper team participated in the challenging Hike for Health.
How do we spend our money?

Simavi’s result for the 2020 financial year was €559K positive (2019: €696K positive). Our budgeted result was a negative amount of €626K. The difference mainly stems from the income from legacies and bequests, which were not budgeted given the uncertainty of such income. The favourable programme results (better coverage of our organisational costs) also contributed to this positive result.

Spent on objectives

In 2020 Simavi spent a total of €25.2 million (2019: €20.8 million) on objectives, €3.8 million higher than budgeted. This was mainly due to the timing difference between receipts and transfers of the payments for alliance partners. In 2020, the ratio of Simavi’s total expenditure on objectives to its total income was 91.5% (2019: 89.2%). This increase is mainly a result of the increase in expenditure and income as indicated above.

Expenditure on objectives, as a percentage of total expenditure, amounted to 93.4% (2019: 92.0%). We strive to spend on average 92% of our income on our objectives.

Non-objective expenditure

Simavi needs to invest to generate funds and incurs management and administration costs to ensure its continuity and proper operation. We are committed to strict control of these costs. Simavi uses two cost indicators to monitor its non-objective expenditure:

- the cost of generating funds, expressed as a percentage of the total income raised;
- management and administration costs, expressed as a percentage of total expenditure.

The percentage cost of generating funds has decreased to 3.8% (2019: 4.6%). This decrease is caused by the higher level of income realised. In monetary terms the costs are almost stable. Our total management and administration costs were 2.7% of our total expenditure (2019: 3.2%). This decrease is also attributable to the higher total expenditure in 2020.

For further details about Simavi’s expenditure, please refer to the Annual Accounts (Annex II, to be found at simavi.nl/AR2020-A2).

Accountability

Simavi’s accounts for the financial year 2020, which form an integral part of this annual report, have been prepared in accordance with the Dutch Accounting Standard for Fundraising Institutions (RiJ 650). They were audited by PricewaterhouseCoopers Accountants N.V., who expressed an unqualified audit opinion on Simavi’s financial statements. Pricewaterhouse-Coopers performs no non-auditing tasks for Simavi. Audit reports are discussed by the supervisory board’s audit committee in a meeting with the auditors, which is also attended by Simavi’s managing director and its director of finance and operations. The supervisory board has approved Simavi’s annual report and accounts for 2020.
Safeguarding our operations

As an organisation that encourages innovation and entrepreneurship and that depends on subsidies, donations and partnerships, Simavi encounters risks.

In facing the effects of the pandemic, it is safe to say that any organisation would be impacted in unforeseeable ways, which underlines the need to safeguard the operations. We are committed to managing risks as an integral part of our operations, focusing on strategies that shield Simavi’s mission and objectives from harm. Our risk management framework and guidelines help us to systematically scrutinise risks, optimise our decision-making and safeguard our operations.

Programmatic risks

Programme implementation is Simavi’s core activity. This entails several aspects of risk that might jeopardise the execution of programmes or the outcomes to be achieved, such as integrity issues, fraudulent (local) partners, substandard partner performance and security, activities that are not rolled out according to plan or that do not adhere to our quality standards, and safety or health incidents. A clear example of this is the pandemic we are currently experiencing. Flexibility in programme execution and creative solutions have mitigated the impact considerably.

Organisational risks

Simavi’s organisational risk tolerance is low. We are committed to responsible human resources management and have enacted policies to safeguard our employees’ health and safety. Our ISO-certified quality management system is an important means of ensuring the controlled and reliable execution of Simavi’s operations and mitigating the associated risks.

Human resources

Simavi’s organisational risk tolerance is low. We are committed to responsible human resources management and have enacted policies to safeguard our employees’ health and safety. Our ISO-certified quality management system is an important means of ensuring the controlled and reliable execution of Simavi’s operations and mitigating the associated risks.

Data security

Data security, both from a cybercrime and privacy point of view, is critical to our operations. Simavi uses the Windows 365 cloud platform which provides flexibility and security. Simavi continuously stresses the importance of data security to its staff, as their alertness and caution is critical.

Reputational risks

For an organisation like Simavi, a good reputation is essential, but at the same time it is fragile. Any incident may pose a real threat to Simavi’s reputation and thus affect its ability to achieve its goals and objectives, and even its continuity.

Many factors can damage Simavi’s reputation: inconsistent, incomplete, incorrect, low quality or uncontrolled communication (online and offline); lack of transparency, involvement in controversial issues or debates; bad press; ethics and integrity issues; incidents in the fundraising or civil society sector; and environmental incidents. Our reputational risk tolerance is low, as these risks may affect people’s trust in Simavi, our partners and the people we work with, and eventually reduce the donations and funding we need to achieve our goals.

To mitigate reputational risk, Simavi endeavours to communicate openly and with a positive tone. We seek not to be provocative, but focus on constructive, transparent and positive messaging.

Our financial health

Simavi’s financial position is sound and sufficient to ensure continuity. Although sufficient funding is contracted for all our budgeted programmes, donor commitments are not irrevocable. For this reason, Simavi maintains a continuity reserve. We have estimated the need to cover six to nine months of operational expenditure, which will enable us to either regain sufficient funding or properly shut down or restructure our active programmes. Our continuity reserve meets this criterion, amounting to €2,336K at year-end 2020.

On 31 December 2020 our total cash balance was €8,317K. This balance consists mainly of the amounts we have received in advance to be spent on projects in the coming year. It also covers our continuity reserve and our earmarked funds and reserves.

Please refer to the explanatory notes to the Annual Accounts for more information on our financial status. (Annex II, to be found at simavi.nl [AR2020-A2]).

Changes on our Outcome Levels

Our organisation

Inherent organisational risks include data security and the availability of qualified staff and well-functioning information systems.

Financial risks

Fluctuations in income are Simavi’s main financial risk. Our financial risk tolerance is low: drastic changes could not only significantly affect individual programme continuity, but also the organisation as a whole.

Funding

Simavi continues to diversify its fundraising strategies in order to spread its income sources and thus its financial risk. We make significant efforts to maintain good relationships with the private sector, institutional partners and governments to secure funding. Funds from these donors constitute a large part of our income, but are mostly earmarked to programmes.

Currency

Simavi’s international operations entail some currency risks. To mitigate these risks Simavi strives to contract and commit only in euros. However, this shifts the risk of exchange rate losses onto our partners. Programme staff work with our implementing partners to ensure potential losses are taken into account in biannual budget updates. Some contracts, however, are denominated in US dollars. The resulting risk is sufficiently hedged by keeping liquidity in US dollars that matches the US dollar obligations we have under these contracts.

Insurance

Simavi mitigates the financial risks arising from fire, burglary, accidents and liabilities through insurance. Simavi maintains a very strict treasury criterion, amounting to €2,336K at year-end 2020.

On 31 December 2020 our total cash balance was €8,317K. This balance consists mainly of the amounts we have received in advance to be spent on projects in the coming year. It also covers our continuity reserve and our earmarked funds and reserves.

Please refer to the explanatory notes to the Annual Accounts for more information on our financial status. (Annex II, to be found at simavi.nl [AR2020-A2]).
A key ingredient for impact: Integrity

Integrity is not a science, a handbook, guideline or a rule – it is an ongoing debate about morals and ethics. Albert Klomp explains why working with integrity is so much more than a formality.

‘The work we do is very much based on trust. We use donors’ money to get our job done and we are committed to spending their money in a fair and transparent way. At the same time, we work with vulnerable groups. We cannot betray trust or harm people. Finally, it is important that our colleagues around the world can work safely. All our stakeholders must be able to rely on proper conduct, transparency and accountability.’

Simavi’s integrity system

- Simavi’s code of conduct clearly defines appropriate and inappropriate behaviour. Our integrity system sets out what procedures are to be followed in the case of inappropriate behaviour and which proportionate sanctions are to be taken in such cases. Simavi has adopted a child safeguarding policy, an anti-fraud and anti-bribery and corruption policy, a whistle-blower policy and a complaints policy (available on our website or on request).
- New employees are familiarised with Simavi’s code of conduct and relevant policies and procedures. All employees are required to submit a certificate of good conduct (Verklaring Omtrent het Gedrag).
- Simavi strongly encourages the filing of complaints and reporting of suspected irregularities and is committed to act whenever its core principles are violated or threatened. Our duty is to protect the victims and restore justice, and to learn from and prevent any repetition of such violations.
- To keep the conversation going we have regular discussion meetings about moral dilemmas.

Integrity issues in 2020

In 2020 we investigated possible cases of fraud by four partners in Africa. All cases were investigated by third parties. The allegations of factual fraud could not be confirmed, but we did find expenditure that was not properly substantiated. These unsupported expenses were excluded from the financial accounts and have not been reimbursed to the local partner. The external confidential adviser for the whistle-blower policy did not receive any reports or requests in 2020.

The Simavi head office received two complaints. The first concerned a consultant in Bangladesh who claimed to be treated unfairly by Simavi. After thorough investigation we concluded that the claim was unfounded.

Consent: a legal and moral matter

The second complaint involved the use of a portrait of a woman from Uganda. This photo was taken by a photographer during a field trip. When taking pictures it is essential that the person or persons being photographed give their consent. Consent has two layers:
1. The person agrees to be photographed.
2. The person agrees to the use of the images.

In this case, the woman was aware of her picture being taken and agreed to that: she posed for the photographer. However, she was not aware of the possibility of the picture being used for an internationally distributed report. This matter became evident during a research in our photo database, in order to restructure consent forms and it was discovered that this particular form was not available. Simavi contacted the freelance photographer, who remembered the woman in question and still had her contact information. We asked our colleague in Uganda to visit her and talk about the matter. It turned out the woman was uncomfortable with Simavi using her photograph for marketing objectives and Simavi responded promptly by replacing her picture and ensuring all printed copies were destroyed.
This resulted in a new way of filing all incoming materials: pictures of meetings, field trips and landscapes are not available for publication, even internally, unless there is explicit permission for them to be used. This even applies for pictures that are clearly posed for. Furthermore, after discussing the matter extensively we decided that pictures older than four years will no longer be used in publications, since people may change their minds about their visibility. The implications may sometimes be impractical, but integrity and moral standards are more important.

Albert Klomp, director of finance and operations: ‘We are grateful for feedback and complaints, as it enable us to improve our current practices and keep us sharp. A crucial part of integrity is justice, so we never act in response to a complaint by one person, but first conduct a thorough investigation. If corrective measures are needed, we act proportionately, rectifying any damage or injustice to those affected, making sure we learn from the situation and taking adequate preventive precautions. If we uncover any criminal conduct, we inform the police. But if we cannot resolve an issue, trust may be damaged – and trust is ultimately essential to how we work.’

Interesting integrity debates in 2020
We regularly discuss issues we encounter in our work. These often present serious dilemmas. For example, in the countries we work in, we respect local cultural norms and laws, but these may go against what we want to achieve, such as gender equality. Local rules may exclude women from certain decision-making processes, for instance. We discuss such conflicts of interest, not only to find a way out of the predicament, but also to equip our staff with the resources and the tools to remain consistent in their day to day work.

An example of a dilemma that was discussed in 2020 is the use of per diems, which we sometimes pay to people for attending a meeting. While this practice may be considered wrong, as payment should not be the reason for participating, it can be an indispensable compensation for income lost due to the attendance. The dilemma requires us to closely scrutinise the situation in each case.

Corporate social responsibility
When selecting and monitoring our local partners, we find it important that we share the same values and vision on what makes a world that works for everyone, including gender equality, LGBTQI+ rights, diversity and inclusion, HIV and AIDS, cooperation among civil society organisations, financial management and sustainability. In accordance with our Theory of Change, sustainability is a core component of our programmes.

At our head office in the Netherlands, we are fully aware of our responsibilities regarding the environment. We offset the CO2 emissions from our road and air travel through a compensation contract with Climate Neutral Group and monitor the number of flights we make per year. Our lunches largely consist of organic and Fair Trade certified products. We use biodegradable cleaning products, we separate out recyclables, we purchase green electricity and we use FSC-certified paper for printing and copying as well as for our correspondence and newsletters.

Double check on accountability
The quality of Simavi’s operations is safeguarded by an ISO-certified quality management system. This system monitors and evaluates our internal processes. It is embedded in internal manuals, which specify the applicable policies, procedures and processes. More detailed information is available in our Declaration of Accountability at www.simavi.org/declaration-of-accountability. This document also describes Simavi’s policy cycle. In October, EIK Certificering BV conducted the external audit of our ISO 9001:2015 and Partos 9001:2018 certifications. We successfully passed this audit and our certificates are valid until 23 November 2021. In 2021 we expect to renew our certification for the next three year period.

The Central Bureau for Fundraising conducted its regular annual review and concluded that we comply with their standards and extended our official recognition.

In addition to external audits, in 2020 we performed two internal audits on our processes and procedures to ensure proper functioning of our system. The outcomes of these internal audits were discussed in the management review and followed up accordingly by the respective employee circles.

Even for pictures that are clearly posed we need explicit permission for use for publications from the people photographed, like this one for our cover.
Our organisation

Simavi is an independent international development organisation. Our head office in Amsterdam is staffed by a dedicated team of 50 people (45.8 FTE, December 2020). We work with approximately 17 local consultants in Indonesia, Bangladesh, Kenya, Nepal and Uganda, who play a key role in the implementation of our programmes.

How do our employees feel?
We conduct an employee satisfaction survey each year. The May 2020 survey showed a slight fall in general satisfaction ratings, which was linked to the Covid-19 lockdown measures. In general, the enforced working from home is detrimental to the well-being of our employees. We have made elaborate efforts to keep in contact with each other and we monitor employee well-being through our newly introduced six-weekly Happy & Healthy Survey.

Simavi’s employee representative body (ERB) consists of four elected employees. The ERB flags and discusses issues that are important to Simavi and its employees and advises the management on the employees’ behalf. The ERB met four times in 2020. Among other things, the ERB was consulted on dealing with the effects of the pandemic.

Agile organisation
Simavi uses a circles-based, agile organisation model. Each employee has one or more roles, which may vary over time. An employee typically is part of one circle, but people can join several circles and take up different roles to match the talents and expertise of the staff member with the needs of the organisation. The organisation is grouped into eight functional circles, each with a specific purpose:

- **Compas**: provides strategic direction and makes sure all resources are available and sufficiently enabled to achieve Simavi’s vision and mission.
- **Partnership Development**: builds strategic partnerships and develops impactful programmes which are ready for implementation, in line with Simavi’s mission and Theory of Change. Those programmes are backed by committed donors and business and other partners. Lobby and advocacy ensure political will and financial support for Simavi’s programmes and priorities.
- **Private Fundraising**: Private Fundraising is a new circle, created in 2020. The circle’s main purpose is to engage the Dutch public financially and intrinsically with Simavi’s work. Direct Marketing and Events have a primary focus.
- **Programme Implementation**: implements existing and new programmes in such a way that each of them leads to maximum impact in order for women and girls to pursue their right to health in line with Simavi’s vision, mission and Theory of Change.
- **Monitoring, Evaluation & Learning**: ensures that Simavi’s Theory of Change is validated, programmes are impact-oriented and contribute to the impact as formulated in the Theory of Change and the programme objectives, and ensures that the lessons learned are incorporated into all our current and future work.
- **Marketing & Communication**: shows our audiences that Simavi’s work changes the lives of women and girls in order to gain further support for our work, financial or otherwise.
- **Human Resources**: ensures that sufficient, qualified and motivated personnel (national and international staff, volunteers and interns) are available to run professional and sustainable operations.
- **Finance & Operations**: creates a professional and sustainable work environment for Simavi personnel, ensures financial planning and control activities are executed accurately and in a timely fashion to ensure adequate operation of the organisation, and ensures the availability and smooth running of all ICT systems and the required quality of working methods and processes.

Human Resources
Simavi’s employee representative body (ERB) consists of four elected employees. The ERB was consulted on dealing with the effects of the pandemic.

Agile organisation
Simavi uses a circles-based, agile organisation model. Each employee has one or more roles, which may vary over time. An employee typically is part of one circle, but people can join several circles and take up different roles to match the talents and expertise of the staff member with the needs of the organisation. The organisation is grouped into eight functional circles, each with a specific purpose:

- **Human Resources**: ensures that sufficient, qualified and motivated personnel (national and international staff, volunteers and interns) are available to run professional and sustainable operations.
- **Finance & Operations**: creates a professional and sustainable work environment for Simavi personnel, ensures financial planning and control activities are executed accurately and in a timely fashion to ensure adequate operation of the organisation, and ensures the availability and smooth running of all ICT systems and the required quality of working methods and processes.

Volunteers and interns
People who work at Simavi on a voluntary basis for at least four days per month are offered a volunteer contract that sets out their rights and obligations. We make verbal agreements with all our other volunteers. All our circles gratefully use volunteers and interns who support our employees. Interns are given a chance to learn valuable skills for their future employment, which for Simavi is also a part of contributing to qualitative work being conducted in the development sector. Both interns and volunteers are highly valued; they help us achieve our ambitions and are an important part of the Simavi team.

11 new employees started work at our Head Office.
6.4% was the average sickness absence rate.
2 new colleagues joined the local team in Uganda.

**IN 2020**

**Start:**
We introduced the global Happy & Healthy Survey, which is held every six weeks to keep in contact during lockdowns.

**Finished:**
The programme office in Indonesia was closed following the successful completion of the SEHATI programme.
How much does the managing director earn?

Our supervisory board has determined the managing director’s compensation package in line with the guidelines for directors’ salaries at charitable organisations issued by Goede Doelen Nederland. In 2020, the managing director’s remuneration amounted to €107,548 (gross). In accordance with the standards set by Goede Doelen Nederland, Simavi does not pay bonuses to its managing director or any other employee.

Leadership

Simavi is headed by a one-person executive board, managing director Ariette Brouwer. She is ultimately responsible for Simavi’s strategy and operations, the decisions made and the results achieved.

Simavi has a two-tier board. The supervisory board oversees the good governance of the organisation. The managing director is appraised by the supervisory board, and the circle leads are appraised by the managing director. The supervisory board is the managing director’s employer and supervisor and acts as her adviser. The board itself has no managerial or operational tasks.

Our supervisory board

We are proud to have a strong group of people, with diverse backgrounds and talents, steering our organisation in the right direction.

Michiel de Wilde, chair, remuneration committee, strategy committee
Strategy and organisation, international development, corporate social responsibility
Member of the executive board / Director at Goldschmeding Foundation for People, Work and Economy

Jeroen Wels, remuneration committee, strategy committee
Human resources management Executive Vice-President Human Resources, Unilever

Willem van de Put
International health development
Senior Research Fellow at the Institute of Tropical Medicine Antwerp

Hans Valkenburg, audit committee
Planning and control, Theory of Change, international development, poverty alleviation, journalism
Self-employed consultant on finance, strategy and planning

Joyce Browne
Global health, maternal health, epidemiology
Assistant Professor, UMC Utrecht

Vera Arnoldus (as from March 2021), audit committee
Legal, governance Corporate Secretary, Atal medial

Every year the supervisory board reviews Simavi’s performance. A highlight from the 2020 evaluation report:

‘2020 was a challenging and in some respects disappointing year. However, the Simavi organisation and its partners have proven to be very resilient. The team kept Simavi’s programmes running as best as possible and responded with a great effort to develop new tools and equipment needed to hit the ground running in 2021.’

Please refer to the full report of the supervisory board (Annex I, to be found at simavi.nl/A00000-A1)

CATCHING UP WITH…

How did you end up in Simavi’s supervisory board?

DR. JOYCE BROWNE, MD PHD Assistant Professor of Global Health Epidemiology, UMC Utrecht, member of Simavi’s supervisory board

I was headhunted by Blikvrouwers, an organisation that ensures a more diverse and young profile within boards. I have a medical and academic background, specialising in research in maternal health, SRHR and global health ethics, so my profile matched well with Simavi. Apart from that, I am really impressed with Simavi’s approach to impact. I have quite a constructive-critical view of NGOs and their role in the world, global health issues and development, so I would not commit to just any organisation. The focus on impact is essential for me.

What do WASH & SRHR mean to you?

There are many important topics when it comes to global health. Simavi chooses to focus on the nexus of WASH and SRHR, based on a century-long track record. There is no opportunity here, chances available money, but a clear expertise and niche. These expertise areas speak to my heart, because they cannot be taken for granted and give political and cultural dimensions to complement the medical aspects. Even in high-income countries, women’s sexual and reproductive rights are still always under pressure. I think it’s important to keep focusing on normalising equal rights.

What was your biggest lesson of 2020?

The pandemic has demonstrated how inequity works. We saw it in the access to care and vaccines between richer and lower income countries, in how women are impacted much harder than men, and in how Covid-19 has a heavier impact on people of lower socioeconomic background – even in the Netherlands – leading to higher mortality rates. The pandemic has shown us the urgency of the need for equal opportunities globally and will hopefully lead to more support for global health and solidarity. We have to move beyond our national egos and work together. There is so much to learn from medical and public health evidence from countries that have suffered from epidemics before.

What is your vision of the future?

Working with students every day, I am fortunate to have access to the interests and visions of the future generation. The topics at the forefront of attention are sustainability, gender equality and decolonisation with fair partnerships. The past year has generated a lot of discussion about changing old systems, including our own position as a Dutch organisation. These conversations have thrown up existential questions. Fundamentally, are we still needed? In my opinion, there is still a very clear reason to exist. The question then is what is the right way to work? I predict a transition to more equal partnerships and less dependency on government funds.
Sabine Brusse, senior communication advisor at Simavi about new ways to reach our audience, even during the pandemic:

Like so many others, this event was cancelled. A virtual alternative did not meet our objectives, and more importantly, in the first half of the year the number of virtual meetings and get-togethers reached – let’s say – epidemic proportions. We challenged ourselves to find an innovative way to engage our stakeholders and raise even more awareness and enthusiasm for the work of Simavi. This resulted in HER Film Festival.

HER Film Festival
Together with our partner Cinetree, a quality film streaming platform, we curated a film programme that showcases and celebrates women worldwide. The films were available on a special online platform, free of charge, for the Dutch public. Besides the headlining films, we hosted online discussions about relevant topics, such as the history of women’s rights and the importance of storytelling. The first edition was a big success. We reached more than 4 million people through the press and social media and attracted more than 30,000 visitors. Through follow-up efforts by e-mail and telephone, more than 200 of these visitors became structural donors.

‘With HER Film Festival we wanted to make it clear, in an accessible way, why Simavi invests in girls and women worldwide, celebrating their rights and potential. This gave us the opportunity to showcase beautiful stories from all over the world, speaking right to people’s hearts.’

‘I am extremely proud that we have launched a festival that is truly about the power of women. The programme was exciting and interesting, with films and documentaries telling the story of women full of strength and optimism.’

HANNA VERBOOM
founder Cinetree

HER Film Festival:
• 29 October to 6 November 2020
• Celebrating women worldwide
• Seven headliners (titles)
• Live Q&As with experts
• The premiere of Her Story, My Story
• 100% Corona-proof
Looking forward - 2021 and beyond

Simavi has been working to improve the health of disadvantaged people since 1925. In all that time we have remained versatile, constantly adapting our working methods to suit the changing landscape of development and the needs and rights of disadvantaged people. Looking back, 2020 was a particularly disruptive year. It has forced us to be flexible and innovative, and at the same time to critically reflect on our added value, system change, financial stance and our position in global debates.

Financial outlook for 2021

In 2020 we finalised four of our major programmes plus some smaller ones. One new programme was acquired in 2020: the WASH First programme, dedicated to preventing the further spread of Covid-19. In addition, our flagship programmes Our Lives, Our Health, Our Futures and WASH SDG will run until 2022. To continue to make an impact we are determined to obtain new funding for the period 2022 to 2025.

In 2021 we anticipate spending €20.3 million on our objectives, about 97% of our total income of €20.8 million. This rather high percentage is due to the investment in programmes from our own reserves. The cost of generating funds is budgeted at 6.6% of total income. This percentage is higher than in previous years and reflects our increased fundraising efforts in 2021.

Our reserves and funding are sufficient to ensure continuation of the existing programmes in the coming years. For the future, we aim to realise a stable volume of funding in the range of €18-22 million per year. To achieve this, we need to prolong our existing sources of income and obtain new sources of funding, targeting both institutional and private donors in the Netherlands and abroad.

Financial setbacks

As a result of the Covid-19 restrictions, the realisation of our programmes has in some cases been delayed or not fully achieved. This also has financial consequences. During the period when programmes are on hold, income is on hold as well, whereas salaries and other fixed costs still have to be paid. This affects both our partners and ourselves.

Fortunately, Simavi’s financial situation is sound, which means we are able to continue our operations. We have the means to support our local partners in these difficult times, using our existing reserves for projects. The possible financial impact on our own organisation can be tackled by our continuity reserve. Given the critical importance of our work, we are confident that we will be able the raise sufficient income to continue our endeavour to realise our mission: a healthy life for all.

Apart from the financial consequences of the pandemic, Simavi had to deal with the fact that we were not awarded with the three submitted strategic partnerships with the Dutch Ministry of Foreign Affairs.

Looking forward - 2021 and beyond

Apart from the financial consequences of the pandemic, Simavi had to deal with the fact that we were not awarded with the three submitted strategic partnerships with the Dutch Ministry of Foreign Affairs.
Beyond 2021: our long-term vision

Ariette Brouwer, managing director of Simavi, about the future of Simavi.

How do you prepare for the future?
We are in the middle of the process of rethinking everything that Simavi is and finding business models and partnerships that fit the current landscape. The angle for this is ideologically driven and not solely financial, although a healthy financial status is needed for us to work towards our objectives. We formulated a new Theory of Change after our ‘Reinventing Ourselves’ process in 2018, so our approach and implementation are up to date. But after last year, we need to zoom out even more to prepare for the future. I call this ‘Simavi 3.0’. It involves critically reflecting on our position in the world: what do we have to offer as a Dutch organisation with expertise in WASH and SRHR? Without knowing the outcome of this process, it is hard to predict the future. Knowing that women’s rights and access to services are still – and in some cases increasingly – under pressure, and how this interacts with global problems such as climate change and Covid-19, it is obvious that we still have an important role. The question now is how do we position ourselves without keeping old (colonial, patriarchal, top-down) systems alive? More concretely, how do we make sure we sustainably shift the power? These are existential questions.

Will Simavi still exist in five years?
When asking big questions it is crucial to keep all options open. Looking at the Sustainable Development Goals and the needs of women and girls, it is easy to recognise the added value of Simavi. That to me is more important than anything, even more than financial setbacks and the crises that we are going through. I try to embrace change with a positive attitude and lead the teams with the credo that we are not only open to change, but are eager to change. Having said that, yes, I think Simavi will still exist.

What will be the main influences for your work in the future?
We have learned that trends and influences can change quickly, but as far as I can see now, there are four major topics in the upcoming years:

1. Climate change: this affects women and girls worldwide in their well-being.
2. Covid-19: the pandemic will not be over until we start treating it as a global problem and look beyond national borders. Simavi can play a role in this.
3. Neocolonisation: old systems need to be reconsidered; we need to admit our wrongs, and the power needs to shift.
4. Digitising: I recognise a major potential if we use digital techniques in a positive way.

The main influence in our work will always be our strong belief that everybody deserves the right to a healthy life. Society benefits from strong women and girls who can pursue their rights to a healthy and equal life. We see that empowered women and girls don’t just improve their own situation but also that of those around them.

I think we can specialise even more within our niche. Simavi is not a big player from an international perspective, but we are very good in what we do. I always say that we are not a tanker, but a speedboat – we can move swiftly in the direction we are needed most.

Raise additional funds
We are investing in 2021 to raise additional funds. To support this objective and to create a clear focus, position papers were prepared for each thematic area and we invested in a clear brand positioning supported by inspiring communications campaigns. This will lead to increased awareness, lead generation and diversified funding.

Develop Simavi 3.0
In this process we will closely investigate our role and relevance as a Dutch NGO, and how that is translated into a suitable business and partnership model. Current issues such as climate change, Covid-19 and the Black Lives Matter movement clearly demonstrate the need to shift the power in order to address systemic exclusion and discrimination – and Simavi must and will facilitate what is needed. It is time for a real change: starting from the in-country priorities, tackling the barriers that women face and how partners listen to and represent their voices. This also means that Simavi needs to investigate its own position and added value in maximising the impact for women and girls.

Create an inspirational ‘can-do’ culture
This concerns the well-being of all colleagues and partners across the globe. It is essential to achieve all the above, but the main thing is that we take care of each other during these uncertain times. The current situation demands flexibility and new working styles. We see it as our responsibility to make sure in this new reality there is still space for ideas, innovations and discussion.
SDGs:
Nine years to go
Simavi contributes to the Sustainable Development Goals: a set of global objectives formulated by the United Nations to focus our attention on the most pressing needs of our planet. The deadline for achieving the SDGs is 2030.

Despite the implications of Covid-19 on our work and the Simavi 3.0 trajectory, the global objectives and their end date is our framework – giving direction to the design and execution of programmes.

Of the 17 goals, we contribute directly to:

SDG 3 – Good health and well-being
It is Simavi’s mission to ensure a healthy life for all. Health is a basic human right. Through our programmes we create the right environment for women and girls to pursue their right to health, with a specific focus on their sexual and reproductive rights.

SDG 5 – Gender equality
Simavi strongly believes that societies will benefit if women and girls have equal opportunities. We contribute to this by working towards equal access to WASH and SRHR services, providing information and education, addressing harmful gender norms and values, and promoting income generating activities, equal representation of women in decision-making processes and women-friendly policies.

SDG 6 – Clean water and safe sanitation
The United Nations states that access to safe water and sanitation is a human right and essential for human health and the environment and for a thriving economy. We share this vision and incorporate it into our activities. With Covid-19 and climate change emerging, focusing on water, sanitation and hygiene becomes even more urgent.

SDG 17 – Partnerships to achieve objectives
Because Simavi believes that progress can only be achieved through strong and meaningful partnerships, we form alliances and cooperate with partner organisations worldwide.

In addition to the above list, there is a strong link between our work and the goals formulated in SDG 1 (no poverty) and SDG 10 (reducing inequalities).

Please refer to page 20 for an overview of the exact indicators formulated within the SDGs and our contribution.
